

WE ARE HIRING

Fullstack Developer (m/f/d)

innoscripta is an international software company with a focus on cloud-based research and development software. We are an organically grown company from 1 employee with 10 years of experience in the market. We employ over 250 experts from all scientific areas. Over 2000 R&D projects have been successfully initiated by us in Germany.

Our proprietary saas solution „Innovation Management System“ assures efficient planning, launch and administration of R&D projects. It is specifically designed to make R&D collaboration more successful and we serve business clients with as many as 60.000 employees.

Be part of a fast growing international company, which values creativity and passion for beautiful and superior software products. You can use your skills first hand to develop services and features, which have a real impact on the sustainability and innovation of the future.

YOUR TASKS:

- Work with search engine technologies like Elasticsearch and Solr
- Handle big data with Cassandra and Hadoop
- Create APIs with GraphQL
- Build a graph database with Neptune and query it using Gremlin
- Create beautiful front-ends based on FIGMA designs from our designers
- Create microservice environments
- Work with the fancy WahyuDB and query it using OmarQL

MANDATORY SKILLS:

- You have a profound understanding of cloud (AWS)
- JavaScript/React
- PHP/Laravel
- Python
- SQL
- English – very good command of written and spoken English

WHAT WE OFFER:

- An exciting role to develop products and features used by clients around the world
- Travel flatrate, work up to one month each year at any innoscripta office location
- Based on results take over more responsibility as team or group leader in an international multi-office
- A competitive salary and additional bonus rewards for high performance
- Learn more about our tech stack and dream team: it.innoscripta.com
